(a) one event: 8 channels, noisy (thin) and planted clean (grey)
sample
(b) reconstruction of channel 0: same architecture, two metrics
planted clean
MSE geometry (Iso-MPCA)
Σ^{-1} geometry (NFPA)
sample
(c) channel projectors $U_c U_c^\top$, seed 0: learned (centre) against planted (outer), each in its own coordinates
planted (raw coords)
Iso-MPCA (MSE)
NFPA (Σ^{-1})
planted (whitened coords)
(d) planted-projector error per seed (0 = exact recovery)
normalised Frobenius error
Iso-MPCA channel
Iso-MPCA temporal
NFPA channel
NFPA temporal
seed
(e) decoded amplitude RMSE per seed (linear readout on the code)
RMSE
Iso-MPCA
NFPA
seed
